## Contractor will build 250,000 cubic metre a day waste treatment plant in New Capital area

The local Hassan Allam Construction (HAC) has been awarded a contract to build a 250,000 cubic metres a day (cm/d) plant in the New Capital area of Egypt.

HAC was awarded the engineering, procurement and construction (EPC) contract by the Ministry of Housing and Development after a competitive bidding process.

This is the second utilities contract that HAC has been awarded in recent months. In April, the contractor, in joint venture with the UAE's Metito, was awarded a contract to build a major water treatment plant (<https://www.meed.com/exclusive-egypt-awards-water-treatment-plant-contract/>) and associated infrastructure at Mahsama in the Sinai peninsula.

The water treatment plant will have a capacity of 1 million cubic metres a day (cm/d), and is being developed to provide irrigation water to agricultural lands in the Sinai peninsula east of Suez.
